

Pressure Regulating Sprinkler Bodies

\$\$\$ Rebate Approved by EBMUD \$\$\$

An in-stem pressure regulator provides a constant outlet pressure to the nozzle.

The following RainPro spray head bodies are constructed of UV -resistant plastic and corrosion resistant stainless steel parts. A pressure regulator is built into the stem and regulates the pressure to the optimal operating pressure of the high efficiency nozzle. We offer 3 models to address the different needs of the different manufacturers of their high efficiency nozzles with; a 30 psi outlet (PRD-30), a 40 psi outlet (PRD-40) and a 45 psi outlet (PRD-45). Check Valves may or may not be included depending on which part # is ordered. Pressure regulation (PRD-XX) and Check Valves (-CKV) are available in the Telescopic Pop Up spray heads, Traditional style pop up spray heads and shrub adapters. All conforming spray heads are listed on back of this page.

Minimum Operating Pressure with PRD option is 25 psi and maximum operating pressure is 75 psi.

Product is 100% made in the USA, by RainPro, Lindsay CA.
